No. 2-2(883)/Tech/SE(P)/CE/2014-15/

Port Blair, dated the

August' 2014

To,

The Joint Secretary(PWD),
A&N Administration,
Port Blair.

Sub: Drought contingency plan for drinking water – reg.
Ref: No. L.No. 2-2/Secy(DWS)/2014 dated. 27/06/14 of Secretary(DWS).

Sir,

With reference to above letter on subject matter, I am directed to inform that in A&N Islands experience summer period from December to May every year.

A&N Islands also receive rain from both the monsoon i.e. South-West and North-East. Scarcity of drinking water is felt only if rain is less during returning monsoon or monsoon is delayed beyond May.

In the present scenario, monsoon is sufficient to cater drinking water requirement and no draught like situation is anticipated in near future.

If any shortage due to less rainfall during returning monsoon will be observed, a contingency plan will be formulated to meet out the crisis accordingly.

All the Districts of A & N Islands have adequate alternate draught mitigation plan to meet any contingencies in drinking water supply with existing mechanism and infrastructure.

Yours faithfully,

Executive Engineer (Plg.)-I,
CE's Office, APWD, Port Blair.

Copy to: -

1. All Superintending Engineers under APWD with the request to direct concerned Executive Engineers to monitor the situation and prepare contingency plan as per requirement under intimation to this office.
